

Welcome to SalonBiz Barber! To help get the most of this feature, we've put together this handy guide to help you get started and know what to expect.

Business Impact

SalonBiz Barber is a tool customized for the walk-in environment of a barber shop. This on-demand service app functions on an iPad®, enabling barbershops and salons to offer a self-serve kiosk in the location. Customers view wait times and add themselves to a list for the next available barber or their preferred staff. They can monitor their place in line or receive a text when the staff is ready. And with the entire service experience (including product recommendations and checkout) taking place in the comfort of the barber chair, you'll have the perfect solution for customers who value both convenience and time.

SalonBiz Blueprint Setup

During setup in SalonBiz Central, you will be selecting a schedule group, service category, and request reasons to be used for SalonBiz Barber. You will want to create a schedule group for the service providers that will work in the barber shop. Place all of your barber shop's services into a unique service category that will be used only by SalonBiz Barber app. Lastly, be prepared to select a Request Reason to be used for both requests and non-requests to the barber shop. These can be the same reasons used already for appointments.

Access

A Vantiv merchant account is required to process credit card transactions on SalonBiz Barber. Visit salonbizsoftware.com/barber to submit your request for your account. Once this is obtained through Vantiv, you will receive your MagTek® card reader that will plug directly into your device's lightning port.

After you receive your new account information from Vantiv, you will receive an email with instructions from our implementation team to schedule a convenient time for your training.

What you need

SalonBiz Barber POS is designed to be used on an iPad® or iPad mini®. It looks great on the large screens. You'll need to download the SalonBiz Barber app from the App Store.

Helpful hints

When you receive your card reader from Vantiv, the packaging will include a USB cord that will be used for charging. You can connect the card reader to any computer or outlet with a USB connection to charge your device. Or, even better, you can charge the card reader while it is plugged into your iPad®, charging both devices at once.

Your MagTek® card reader will arrive with clips to use to stabilize the device while it's attached to your iPad®. These are not required, but will protect the connections from damage due to bending.
